AROKU

Company Information & Customer Support Guide

A sample company knowledge document for demonstrations, support workflows, and retrieval-augmented generation (RAG) practice.

Document type: Company overview and customer support reference
Version: 1.0 **Prepared:** October 2026

Important: Aroku is presented here as a fictional demo company. The details, prices, policies, and contact information in this document are illustrative and should be replaced with verified company information before real-world use.

1. Company Overview

Company name: Aroku

Business type: Online retail brand focused on practical everyday technology accessories and desk essentials.

Operating model: Aroku sells products through its online store and provides customer assistance before and after purchase.

Brand purpose: Make useful everyday products easier to discover, purchase, and use, with clear product information and straightforward support.

Aroku aims to provide a simple shopping experience. Customers should be able to understand what a product does, whether it fits their needs, how much it costs, when it may arrive, and what options are available if something goes wrong.

Mission and service principles

• Clarity: explain product details, prices, and policies in plain language.

• Reliability: provide consistent order updates and practical troubleshooting steps.

• Respect: treat customers politely and avoid blaming them for problems.

• Privacy: request only the information needed to help with an issue.

• Transparency: do not promise a delivery date, refund, or replacement until it has been confirmed.

Who this document is for

This guide is intended for a customer-support assistant, support staff, and internal demonstrations. It contains general company information, example product details, order and delivery guidance, returns, payment information, and sample answers to common questions.

2. Products & Services

Aroku's example catalogue contains practical accessories for work, study, and home use. Product names and prices below are fictional placeholders.

Aroku Flex Wireless Mouse

Description: A compact wireless mouse for everyday laptop and desktop use. Example features include adjustable sensitivity, a USB receiver, and a lightweight shape.

Example price: ■799
Example warranty: 6 months for manufacturing defects
Compatibility: Most computers that support a standard USB mouse; specific device compatibility should be checked before purchase.

Aroku Desk Hub 5-in-1

Description: A desk accessory that expands compatible laptop connectivity. Example ports may include USB-A and USB-C data ports. Charging and video capabilities must be verified from the final product specification.

Example price: ■1,499
Example warranty: 12 months for manufacturing defects
Compatibility: Depends on the customer's device ports and supported features.

Aroku Everyday Laptop Sleeve

Description: A padded sleeve designed to help protect a laptop from everyday scratches and light bumps.

Example price: ■999
Available sizes: 13-inch and 15-inch categories, subject to stock
Important: Customers should compare the laptop's actual dimensions with the sleeve dimensions.

Product information rules

• Confirm the exact product variant before giving specifications.

• Treat example prices and stock as placeholders, not live inventory.

• Never claim that an accessory is compatible with a device unless the compatibility information is available.

• If a specification is missing, tell the customer it needs confirmation rather than guessing.

3. Ordering & Account Help

Placing an order

Customers choose a product, select the available variant, provide delivery details, choose a supported payment method, and submit the order. An order confirmation should be shown or sent after the order is successfully created.

Order information

An order record may contain an order ID, customer account ID, order date, items, quantity, payment status, delivery address, shipment status, and tracking reference. Support staff should use the order ID or authenticated account context to locate the correct record.

Order status definitions

- **Placed:** The order has been created but may not yet be packed.
- **Processing:** The order is being prepared.
- **Shipped:** The parcel has been handed to the delivery partner.
- **Out for delivery:** The delivery partner expects to attempt delivery soon.
- **Delivered:** The carrier has marked the parcel as delivered.
- **Cancelled:** The order has been cancelled. Refund status, if applicable, should be checked separately.

Changing or cancelling an order

A customer may request a change or cancellation before dispatch. Whether the request can be completed depends on the order's current status and the store's actual systems. Once an order has shipped, the customer may need to follow the return process instead.

Account access

For account issues, confirm the customer is using the correct email address and the official sign-in process. Never ask a customer to share their password or one-time password with support. If an account cannot be verified, provide the official account recovery process.

4. Shipping & Delivery

Shipping guidance

Delivery estimates depend on the delivery address, stock availability, order processing time, carrier capacity, weather, and local conditions. Any delivery window displayed at checkout or in the order record should take priority over a generic estimate.

Illustrative delivery estimates

• Metro and major city addresses: approximately 2–5 business days after dispatch.

• Other serviceable locations: approximately 4–8 business days after dispatch.

• Remote locations or exceptional conditions: delivery may take longer.

These estimates are examples only and are not a guarantee. A support assistant should check the live order record or official shipping policy before giving a specific estimate.

Tracking a parcel

If tracking is available, provide the carrier name and tracking link from the order record. If tracking has not updated, explain that carrier scans can take time to appear and check again using the available system. Do not invent tracking numbers or claim that a parcel has moved without evidence.

Failed delivery

If delivery was unsuccessful, check the carrier's recorded reason and the next delivery attempt, if available. Confirm that the address and phone number on the order are correct. If the parcel is marked delivered but the customer has not received it, ask them to check with household members or the building reception where appropriate, then escalate the case to the delivery support process.

Shipping fees

Shipping fees, free-shipping thresholds, and any remote-area surcharges must be taken from the current checkout page or official policy. This sample document does not define a real shipping fee.

5. Returns, Refunds & Replacements

General guidance

A return or replacement request should be evaluated using the actual order date, product category, delivery date, item condition, reason for return, and the current official policy. Do not guarantee eligibility until these details have been checked.

Illustrative return policy

• Return request window: within 7 days of delivery for eligible items.

• Item condition: unused, with original accessories and packaging where required.

• Damaged or incorrect item: the customer should report the issue promptly and provide photos if requested by the official process.

• Non-returnable items: certain clearance, personalized, hygiene-sensitive, or explicitly excluded products may not be eligible, subject to applicable law and the published policy.

The above is an example policy for testing a support assistant. It is not a statement of a real Aroku policy.

Refund process

Once a return is approved and the returned item is received or otherwise verified according to policy, the refund should be initiated through the original payment method when supported. The time for the funds to appear may depend on the payment provider or bank. The support assistant should distinguish between 'refund requested', 'refund approved', 'refund initiated', and 'refund completed'.

Replacement process

A replacement may be considered for an eligible defective, damaged, or incorrect item, depending on stock and policy. Confirm the product, order, issue, and available resolution before promising a replacement.

Escalation

Escalate cases involving repeated delivery failures, disputed delivery records, payment deductions without an order, suspected fraud, safety concerns, policy exceptions, or a customer who requests a human agent.

6. Payments, Privacy & Security

Payment methods

The actual store may support methods such as UPI, debit or credit cards, net banking, wallets, or cash on delivery. The available methods must be confirmed at checkout. Do not tell a customer that a payment method is supported unless it is currently available.

Payment issues

If money appears to have been deducted but no order confirmation is available, check whether an order exists and review the payment status using authorized systems. Do not ask the customer to share a full card number, CVV, banking password, UPI PIN, or OTP. If the payment is pending or failed, explain the next steps shown by the payment provider or official policy.

Privacy principles

• Ask only for details necessary to identify and resolve the issue.

• Do not reveal one customer's order, address, phone number, or account details to another person.

• Do not expose internal credentials, API keys, access tokens, or private operational notes.

• Use authenticated account context for private order or account questions.

• Avoid repeating sensitive customer data in responses unless necessary.

Security and support boundaries

A support assistant should never request passwords, OTPs, UPI PINs, or complete payment-card security details. If a customer reports suspected account compromise or unauthorized payment, direct them to the official account-security or payment-provider process and escalate where appropriate.

7. Customer Support Workflow

Recommended handling process

1. Understand the customer's request and identify whether it concerns a product, order, delivery, payment, return, or account.

2. Ask for the minimum information needed to locate the relevant record, such as an order ID, while following authentication rules.

3. Check the appropriate source of truth: product catalogue, order system, tracking system, payment record, or published policy.

4. Explain the verified result in simple language.

5. If the issue cannot be resolved, state what is known, what remains uncertain, and the next action or escalation path.

6. Do not claim that a refund, cancellation, replacement, or address change has been completed unless the relevant system confirms it.

Tone of voice

Aroku support should be friendly, calm, concise, and practical. Acknowledge inconvenience without making unsupported admissions or promises. Use short steps when explaining troubleshooting. Avoid blaming the customer or using technical jargon without explanation.

Example response patterns

Delivery delay: “I can help check that. Please share your order ID, and I’ll look at the latest status available.”

Refund question: “I’ll check whether the refund has been requested, approved, or initiated so I can give you the correct update.”

Unknown product detail: “I don’t have a verified specification for that detail yet, so I don’t want to guess. I can help you check the product information.”

Needs human review: “This needs a closer review by our support team. I’ll explain the information to have ready for the handoff.”

8. Frequently Asked Questions

How can I check my order status?

Use the order ID or sign in to the account used for purchase. The latest status should be checked in the order system rather than inferred from the order date.

Can I change my delivery address?

An address change may be possible before dispatch, but it depends on the order status and system capabilities. Contact support as soon as possible; do not assume a change has been applied until confirmed.

My tracking link is not updating. What should I do?

Tracking events may not appear immediately after dispatch. Check the carrier link and the latest order record. If the delay exceeds the stated carrier or store guidance, escalate the case.

What should I do if I received the wrong item?

Keep the item and packaging, record the order ID, and follow the official incorrect-item process. Photos may be needed for verification.

How do I request a refund?

Start a return or refund request through the official store process or customer support. Eligibility and timing depend on the current policy and order details.

Does every product have a warranty?

Warranty coverage varies by product. Check the product listing, invoice, or official warranty terms for the specific item.

Can support ask me for an OTP or password?

No. Customers should not share passwords, OTPs, UPI PINs, or card security details with support.

What if the assistant does not know the answer?

It should say that the information is not confirmed, avoid guessing, and offer a relevant next step or human escalation.

9. Knowledge Base & RAG Usage Notes

This document can be used as a starter knowledge base for a retrieval-augmented generation (RAG) customer-support assistant. The assistant should retrieve relevant passages and use them to answer questions, while checking live systems for information that changes frequently.

Information suitable for retrieval

• Company overview, mission, and support principles.

• General product descriptions and compatibility cautions.

• Definitions of order statuses.

• General shipping, return, refund, and warranty guidance.

• Privacy and security rules.

• Frequently asked questions and response patterns.

Information that should come from tools or live systems

• A customer's current order status or tracking events.

• Current stock, exact prices, discounts, and product variants.

• Customer account details or order history.

• Whether a refund has actually been initiated or completed.

• Whether a cancellation, replacement, or address change succeeded.

Suggested assistant rules

1. Use retrieved document content as guidance, not as proof of a live transaction.

2. Treat the sample policy and catalogue details in this file as fictional until replaced with verified business data.

3. If sources conflict, prefer the current official system or approved policy source.

4. Do not invent product features, tracking updates, prices, policy exceptions, or transaction outcomes.

5. Ask a concise follow-up question when essential information is missing.

6. Protect customer data and escalate sensitive or unresolved issues.

Document maintenance

When Aroku's real information is available, replace all example details, add the official contact channels and legal policies, and record the date and owner of each update. Re-index the knowledge base whenever approved content changes.
